Managed Services and Hosting by LRS
Simple, Seamless, Secure

The LRS® Managed Services offering provides customers the benefits of LRS' industry-leading Enterprise Output Management software without the need to dedicate internal staff resources to install, configure, maintain, and support the LRS solution. Running in a secure LRS-hosted cloud environment, our scalable services offering delivers rich functionality and reliable output delivery while freeing your IT teams from the burden of managing print.

Our Value Proposition

The LRS Hosting Services solution combines best-of-breed cloud, networking, and security tools with the proven LRS suite of output management solutions. Our highly experienced global team of experts handles day-to-day support and system optimization to provide your organization a reliable and secure document print and scan environment that lets your employees focus on your core business instead of dealing with network errors, security threats, load balancing, etc.

Hosted vs On-Premise: Which is right for me?

Software used to provide the LRS managed service can be installed either on-premise at a customer data center or can be hosted in LRS' Azure-based cloud platform.

ON-PREMISE	LRS-HOSTED
Full control of environment by customer IT staff	Simple maintenance; LRS manages print
Custom-tailored security; can use existing security configuration and staff	Uses proven Azure security tools and best-of-breed firewall protection, all administered by LRS staff
Compliance-ready; adheres to your existing regulatory guidelines and policies	LRS hosting and security experts work with you to ensure policy compliance
Utilizes existing IT resources to configure, maintain, and support	LRS takes care of all updates, patches, etc.

Global Support

When you entrust your output management environment to LRS Hosting Services, you get more than proven software running on the secure Azure-based cloud platform. A crucial part of our LRS Hosting Services offering is our global team of output experts. As an LRS Managed Services customer running in a hosted environment, your systems will be overseen by a dedicated team of LRS experts located in strategic locations around the globe. This enables us to provide managed security information and event monitoring (mSIEM) to protect the integrity of your output management environment.
