

MFPsecure/Scan for Mobile

MFPsecure solutions from LRS

In the modern workplace, employees are more mobile than ever, requiring access to critical business documents wherever and whenever they are working. To be successful, they also need tools to electronically capture and preserve documents while on the go.

Documents – in paper and electronic form – play a key role in many business processes. The ability for users to digitize and share these documents with other stakeholders is critical to your organization’s success.

The MFPsecure/Scan™ for Mobile solution enables users to quickly scan and share digital copies of documents using a simple app that runs on an Android or iOS mobile device.

How it Works

The MFPsecure/Scan for Mobile product is fully integrated with the VPSX® Print App, which LRS customers use for a variety of output-related functions. For example, a user can view documents in their personal queue, locate available print devices, and release documents for printing on a nearby MFP or printer. If the end user is licensed and authorized to use the MFPsecure/Scan for Mobile product, a “Secure Scan” icon appears in the app.

The MFPsecure/Scan for Mobile solution puts enterprise-class document imaging capabilities in the hands of users wherever and whenever their jobs require.

Once a user authenticates on their device, they can select from a list of document scanning workflows. The MFPsecure/Scan for Mobile app guides the user through the scanning process, in which they:

- Capture document images using the camera on their mobile device
- Crop and/or adjust the image for accurate imaging (e.g., keystone adjustment & image de-skewing)
- Verify the order pages should appear in the scanned document
- Upload & transmit the electronic document to the email recipient, folder, online storage portal, or other destination.

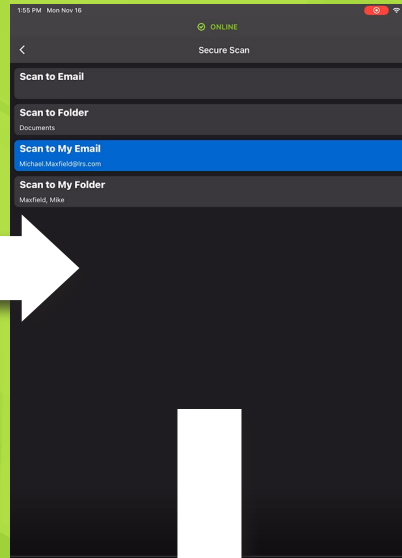

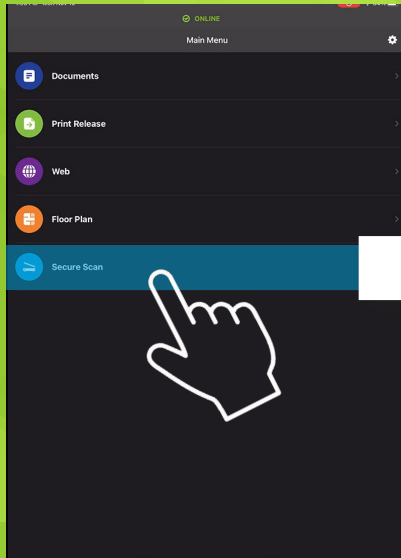

Single Solution, Many Uses

The MFPsecure/Scan for Mobile app puts enterprise-class document imaging capabilities in the hands of users wherever their job duties take them. For example:

- An insurance claims agent can go to the scene of an accident and capture scans of police reports and other relevant info.
- Traveling salespeople can capture images of expense receipts while still on the road.
- An employee working from home can capture images of documents to share with teammates.

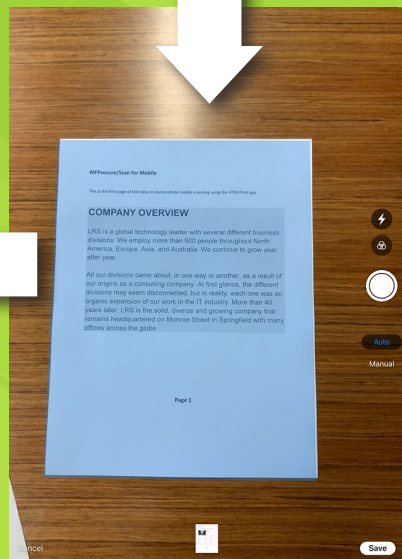

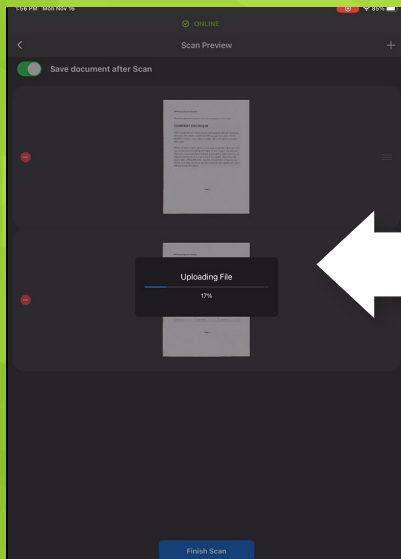

Basic MFPsecure/Scan for Mobile screens

The MFPsecure/Scan for Mobile product appears as a new menu item within the standard VPSX Print App. To scan a document, users click "Secure Scan" and follow the prompts on the screens that follow.

Various scan options appear, based on which workflows are defined for that given user.

The user can drag the scanned pages to rearrange them in a different order, then click the "Finish Scan" button to deliver them to the folder, email address, or other destination they selected in an earlier step.

The app launches the camera on the user's mobile device. Users can take pictures of one or more pages in the document, crop and/or adjust page sizes, then save the document.

Discover the benefits of mobile document scanning in your organization.
