Introductions

Industry Trends and LRS Product Update

Guy Tucker & Mark Ladd

Wait – Is it really a new world?

- No. This is the same world we had last year. But . . .
- Yes.
 - As we have matured in this world that we created, we have gained
 - Experience
 - Wisdom
 - Knowledge

Architecture

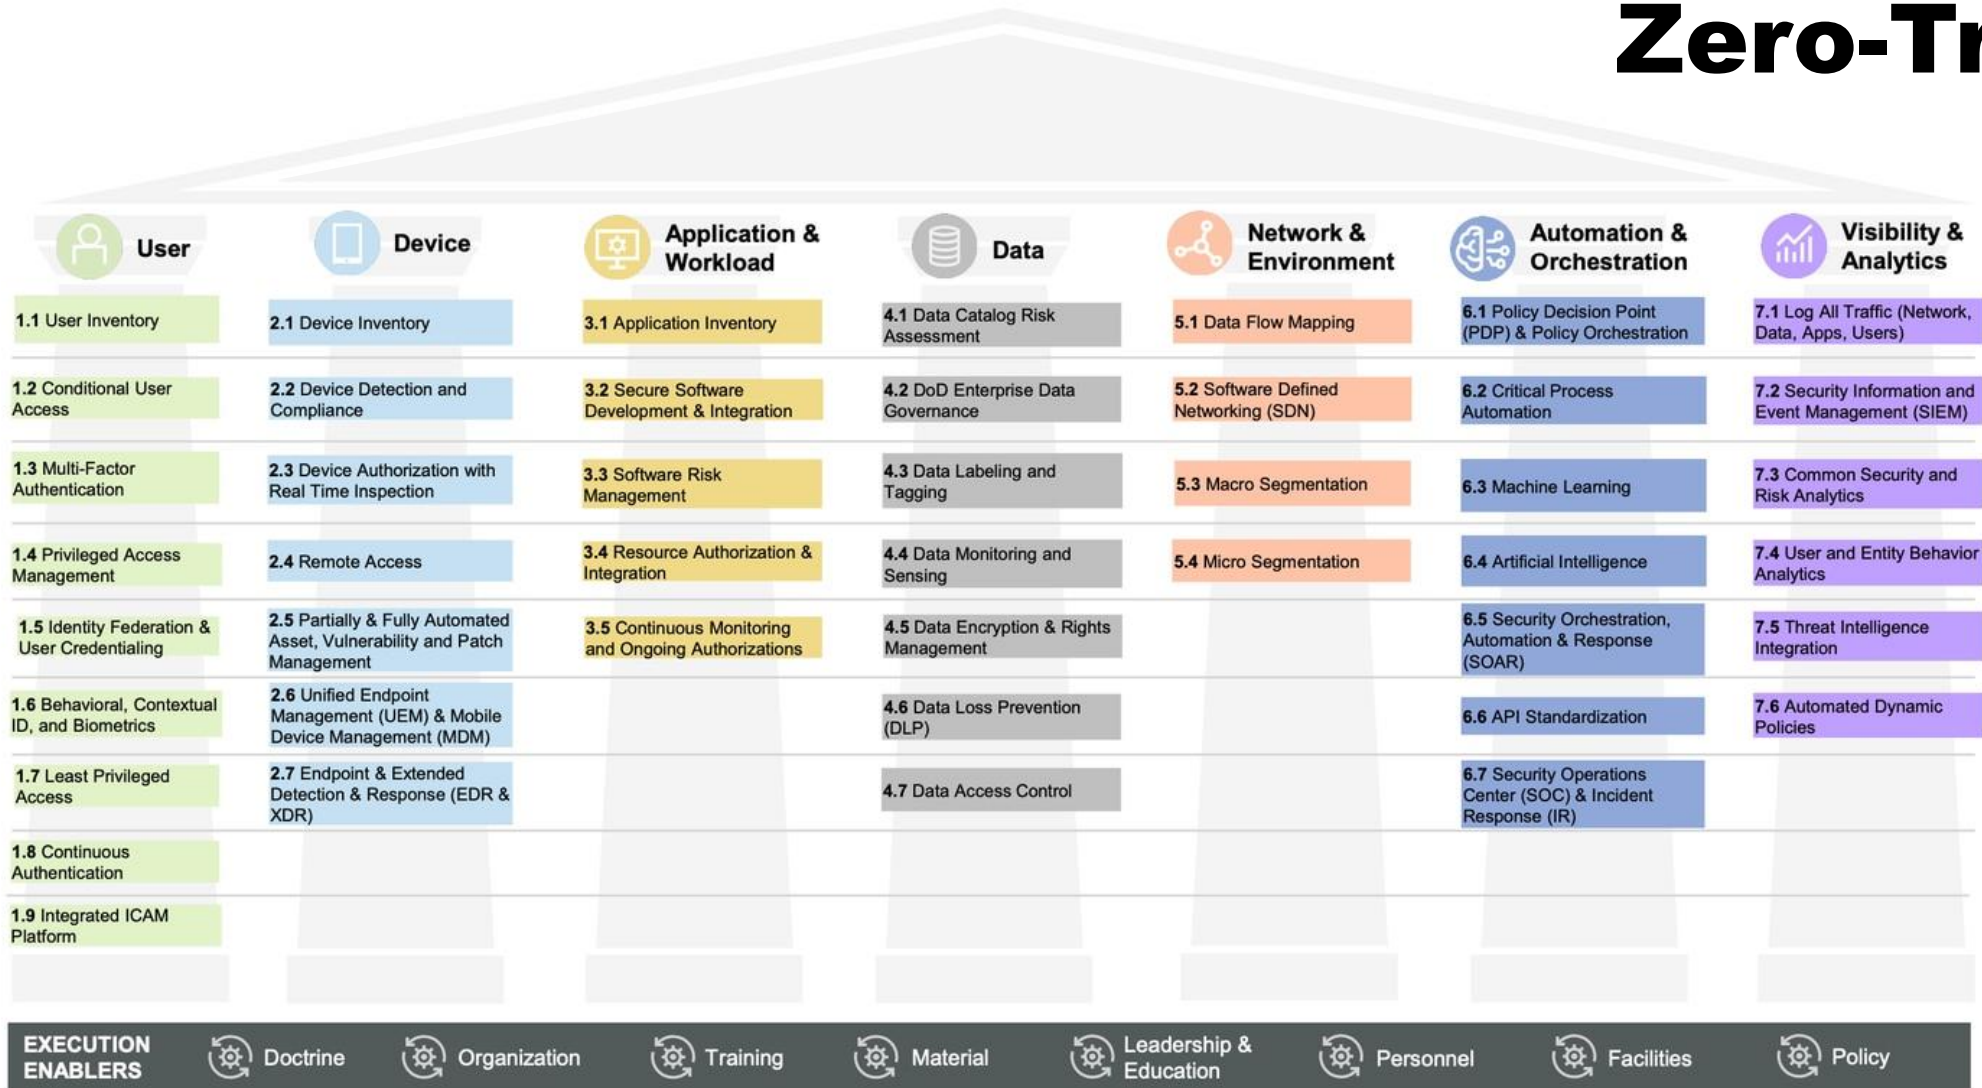

- Layered architectures began in 1974 with SNA followed a few years later with the OSI model
- TCP/IP began to be thought of in layers
- Over time, we built expertise and staff around layers rather than specific platforms and products

| Schicht | ISO | SNA |
|---------|--------------|-------------------------------------|
| 7 | Application | End User |
| 6 | Presentation | Presentation & Network Services |
| 5 | Session | Data Flow Control |
| 4 | Transport | Transmission Contr. Network Control |
| 3 | Network | Path Control |
| 2 | Data Link | SDLC |
| 1 | Physical | Lines |

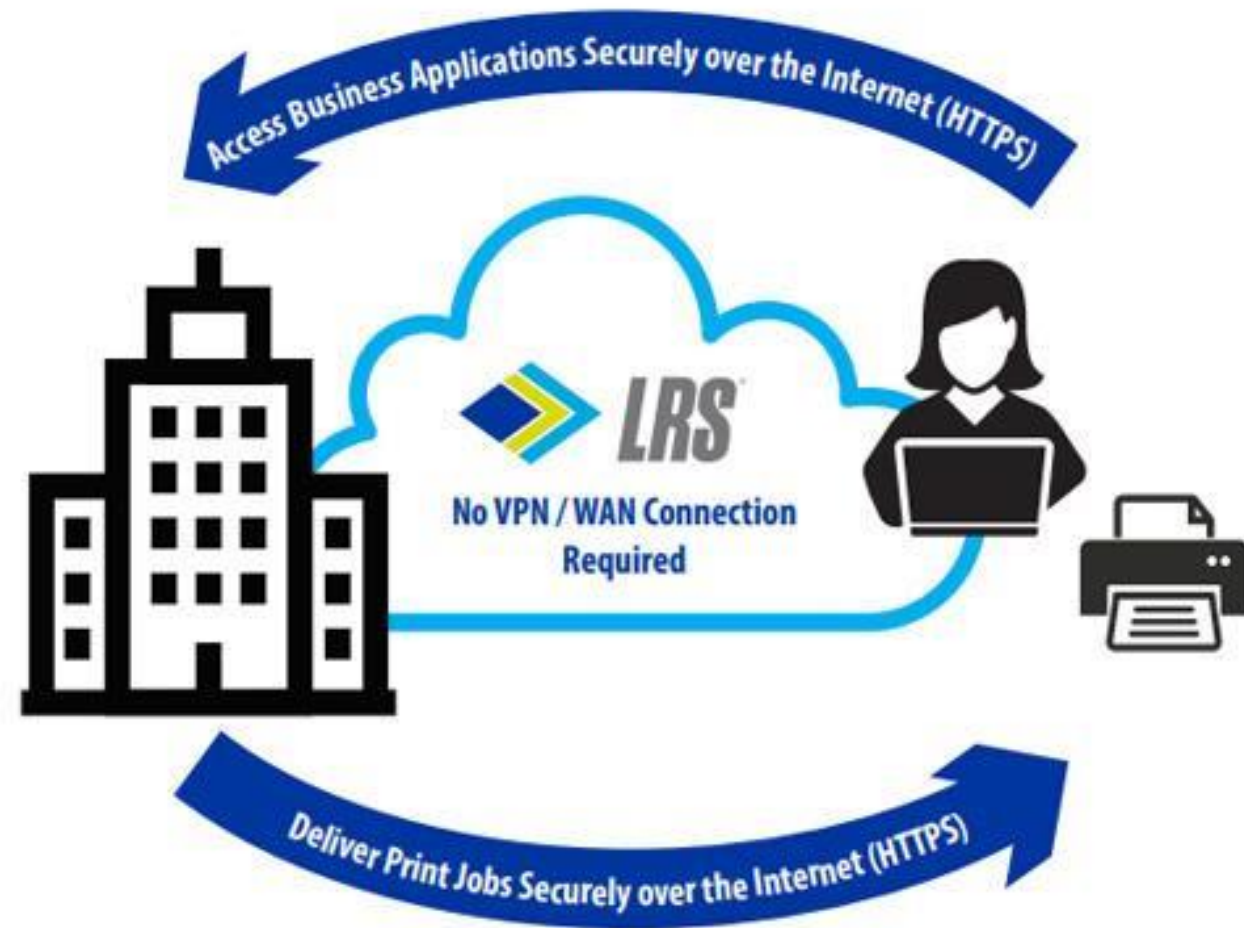

As our circle of knowledge expands, so does the circumference of the darkness surrounding it.

Zero-Trust

Pushing Print on the Open Internet

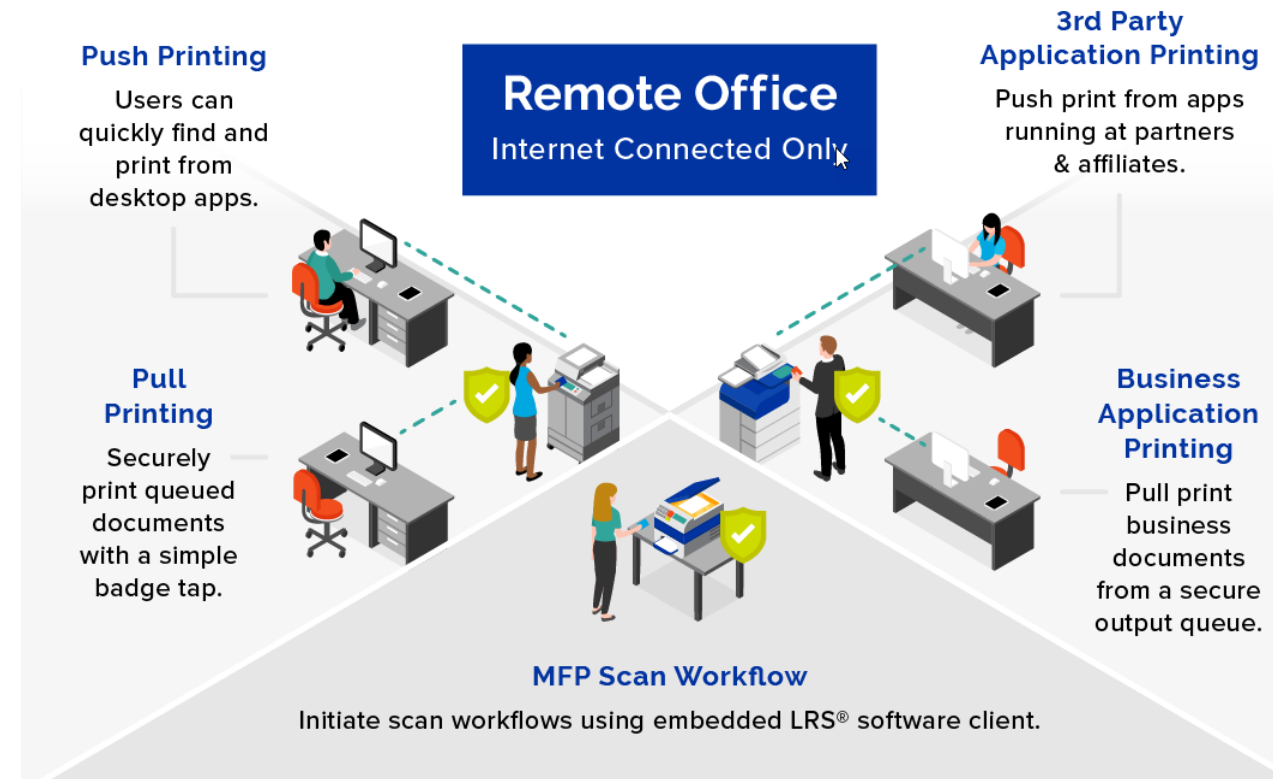

Affiliate Print allows for pushing jobs with only an open internet connection

- Contracted entities
 - Distribution centers
 - Manufacturing facilities
 - Associated clinics

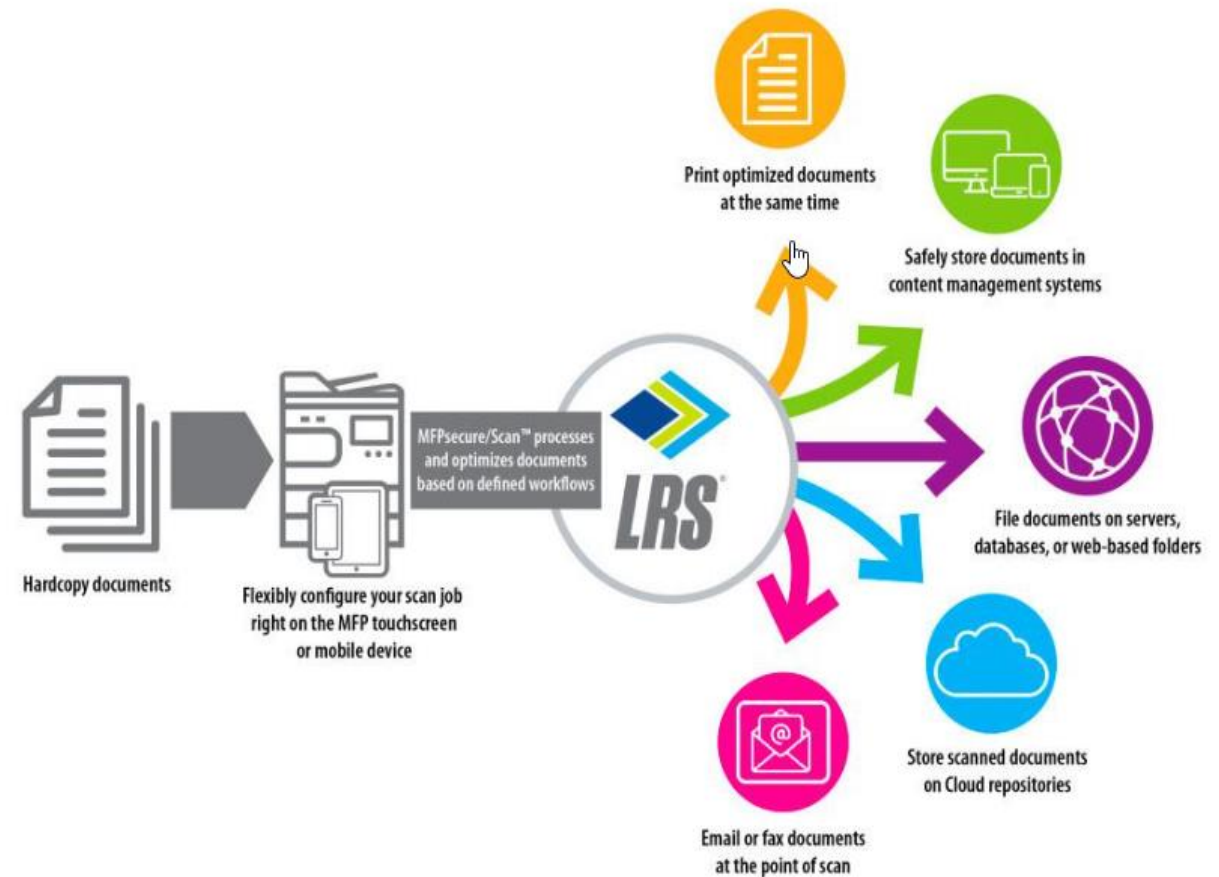

- VPN technology is going away in the enterprise
- Workstations must associate a user ID
- Devices cannot sit and wait. They must be able to phone home.
 - Retail stores
 - Temporary offices

Internet Pull Print

Internet Scan

- Likewise true on Scan technology
- Processes are two way
 - Contracted entities need to update applications
 - This may include scanning of physical documents

Work from home is here to stay

- Even software VPN is undesirable
- Workers enabled for WFH are more likely to stay
- Business applications are not geared for WFH especially in the print and scan arenas

A graphic featuring the words "The End" in a white, elegant cursive font. The text is centered within a dark gray circle, which is itself surrounded by several concentric circles of varying shades of gray, creating a tunnel-like effect.

The End

Driver deprecation

- Apple announced end of driver support
 - AirPrint mechanism
- Microsoft announced printer driver support ending
 - Microsoft Universal print compatibility

The 'S' word

Examples

- NVIDIA (semiconductors) lost employee credentials and proprietary information
- Costa Rica – Had its economy shutdown \$30 million per day
- CHI Heath – Went back to paper records
- JBS Beef - \$11 million ransom
- Maersk - \$300 million in losses
- UK NHS - £92 million in loss

LRS Security Approach

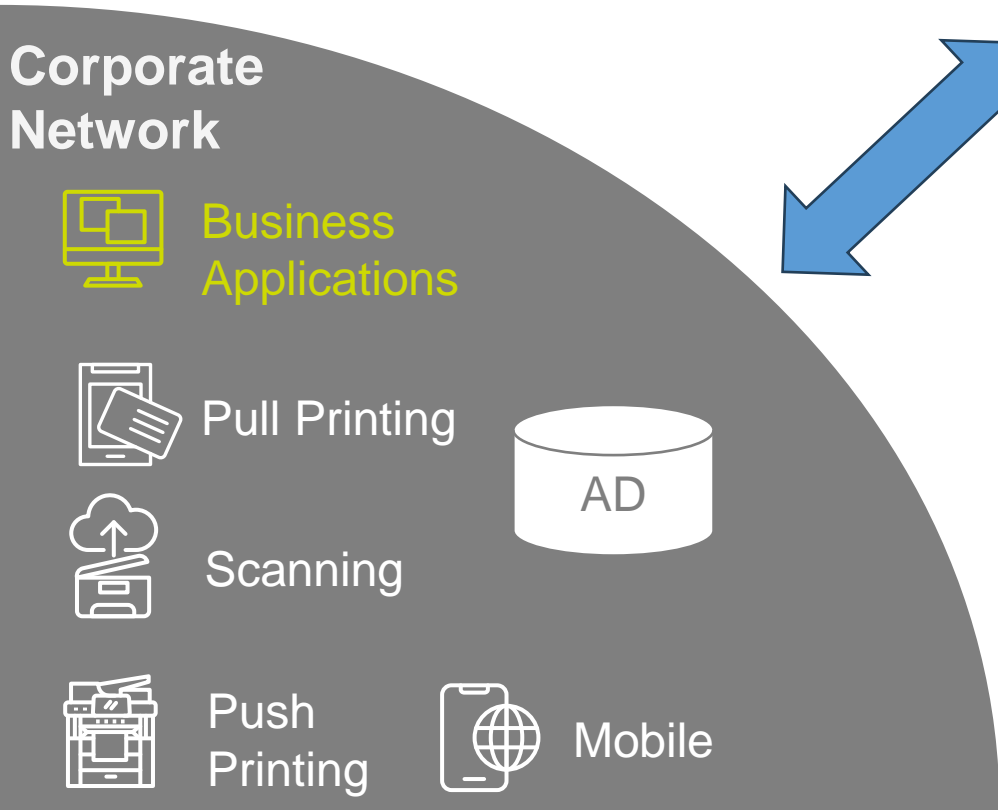

- CVE prevention
 - Penetration Testing
 - Code scanning
- Encryption
- Hardcopy security (pull printing)
- Windows vulnerabilities
 - How we work around them
- General device security

Hybrid Approach – On Premise

- Common use
- Everything Onsite / Datacenter
- Federated authentication

Hybrid Approach – Mixed (typical)

Via Internet
OR Personal VPN

Corporate Network

Business Applications

Pull Printing

Scanning

Push Printing

Mobile

Business Applications

Pull Printing

Corporate or Affiliate Printer

Distant Offices / Coworking

Hybrid Approach – LRS managed / Hosted

Via Internet

Business Applications

Pull Printing

Scanning

Push Printing

Mobile

Business Applications

Pull Printing

Corporate or Affiliate Printer

Distant Offices / Coworking

- On premise
- Private Cloud
- Public Cloud provider
- Local authentication
- Modern authentication
- Mix and match
- We are here to help

Hybrid Approach

Future Product Roadmap

Guy Tucker & Mark Ladd

Agenda

- R4 update – What's happened in the last year?
 - Language support
 - Ease of use
 - Origin
 - General Security
 - Database
 - VSPA
 - PPM
 - MFPsecure
- Mission Control with Demonstration
- Futures

Language Support

- Where we were -
 - English
 - French
 - Spanish
 - Italian
 - German
 - Russian

- And now –
 - Catalan
 - Czech
 - Danish
 - Dutch
 - Finnish
 - Greek
 - Hungarian
 - Korean
 - Norwegian
 - Polish
 - Romanian
 - Swedish
 - Turkish
 - Simplified Chinese
 - Traditional Chinese

Ease of use

- User Interfaces have evolved from basic list screens to modern administrative tools
- Printer dialogs both print and scan have evolved based on customer request
- Personal Print Manager evolution
 - Printer Driver Manager – command line or admin interface
 - PPM – Based on customer design imperatives
 - PPM today – highly functional print management tool with end-user simplicity in mind

The screenshot displays the Personal Print Manager (PPM) application interface, showing multiple overlapping windows. The main window displays the following sections:

- Navigation:** Printers, Print Jobs, Profile, and Tour.
- Job Status:** Queued Jobs, Retained Jobs, Failed Jobs.
- Job Types:** Only Delegated Jobs.
- Job Filtering:** All Jobs, Secure Print, Direct Print.
- Job Sorting:** Newest First.
- Job List:**
 - Microsoft Word - LRS Gateway - Configuring Azure AD authentication**
Printed to MY_DOCS_COLOR at 2021/05/12 17:38:42
Status: Waiting Pages: 19 Copies: 1 Size: 3.1 MB
 - Travel declaration (1).pdf**
Printed to P350 at 2021/05/11 09:11:27
Status: Printed Pages: 4 Copies: 1 Size: 206.2 KB

END OF LIST

The screenshot displays the LRS VPSX web interface. It features a dark sidebar with navigation options: Printers, MFPsecure, Print Server, Security, Web, and Apps. The main content area is divided into a 'Print Server List' section and a 'Dashboard' section. The 'Print Server List' shows a table of printers with columns for printer name and job count. The 'Dashboard' section contains several gauges and a table of printer status.

Print Server List

| Printer | Jobs |
|------------------|------|
| AUTODEFINE_SAP | 27 |
| AUTODEFINE_SEND | 748 |
| DBNRZO | 10 |
| EXSTREAM_DUMMY | 18 |
| IN_BUNDLE | 27 |

SNMP

- SNMP Property Updates at print time
 - We have long done this for LPD, SOCK, PJP and COT commtypes.
 - This enhancement adds IPP and IPPS commtypes to the list
 - SNMP must be enabled.

IPPS Status

- Encryption to the device
- Jobs streamed using IPP / IPPS can be configured to track progress of the print job after streaming is complete.

IPP Options

- | | |
|---|--|
| <input type="checkbox"/> Use Content-Length encoding for IPP | <input type="checkbox"/> Reuse IPP connection when available |
| <input type="checkbox"/> Force IPP printers to autodetect data type | <input type="checkbox"/> Enable IPP clients to change printer status |
| <input type="checkbox"/> Limit IPP Get-Jobs response to My-Jobs | <input checked="" type="checkbox"/> Wait for IPP print job completion |
| <input type="checkbox"/> Obscure details in IPP Get-Jobs response | <input type="checkbox"/> Display media sheets processed while waiting for IPP print job completion |
| <input type="checkbox"/> Return all jobs to IPP Get-Jobs requests | |

Logging of queue and system changes

- A new keyword has been added that allows administrators to specify the amount of detail included in the VPSX log when a VPSX or Printer configuration change has been made.

PPQ masking

The screenshot displays a printer management application interface. On the left is a dark blue sidebar with a list of printer-related categories: Printers, PersonalQs (highlighted in light blue), MFPsecure, Mobile Connector, Innovate/Audit, Print Server, Gateway, Security, and Apps. The main area shows a search bar with 'Printer' and a 'Masking' button. Below the search bar are 'Add' and 'Refresh' buttons. A 'PersonalQ' list on the left contains 'MYDIRECT' and 'MYQUEUE'. A modal dialog box is open, titled 'Masking', with the following fields and options:

- Location:** A dropdown menu currently set to 'All locations'.
- PersonalQ Mask:** An empty text input field.
- Group Mask:** An empty text input field.
- VPSX Mask:** An empty text input field.
- Output Queue Minimum:** A numeric spinner control set to 0.
- Retained Queue Minimum:** A numeric spinner control set to 0.
- PersonalQ Status:** A section with checkboxes for 'Selected', 'Idle', 'Stopped', 'Error', and 'Diverted'.
- Device Properties:** A section with checkboxes for 'Color', 'Duplex', and 'Staple'.
- Driver:** A section with checkboxes for 'Windows', 'Linux/Mac', and 'Not Specified'.
- Set as Default:** A checkbox at the bottom left.
- OK:** A button at the bottom right.

Security hooks

Security

- Configure
- Log
- Active Users
- Guest Users
- Users
- Groups
- Mobile Devices

+ MFPsecure Options

+ Mobile Connector Options

+ Innovate/Audit Options

- SSL Options

SSL CA File * C:\work\hw07068.lrsinc.org.cer

TLS Minimum Version TLS 1.0 **Deprecated**

+ Proxy Options

LRS/Gateway

- LRS/Gateway
 - Linux support came out with R4
 - Fix Level 2 now includes PostgreSQL support

PPM / VSPA

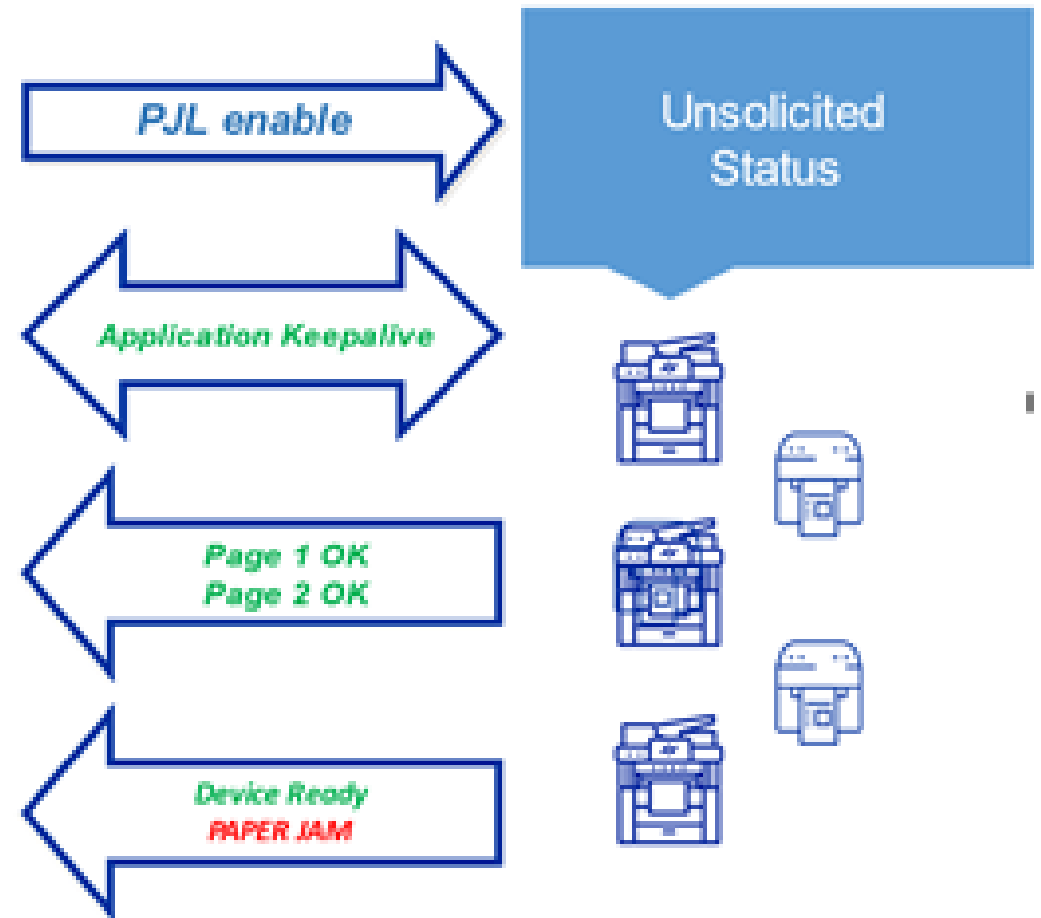

- Color scheme better fits into the VPSX R4 look and feel
- If a default printer is changed in PPM, it gets reported back to Gateway for continuity
- Also, Default Printer can roam bound either to the user of terminal
- And a Direct printer can be a default.

PPM / Default printer and Proxy

- What is a Proxy? (or forward proxy in this case)
- Operating System Environment Variables
- System vs. User context
- Talking to printers
- PDM vs. PPM vs. Broker

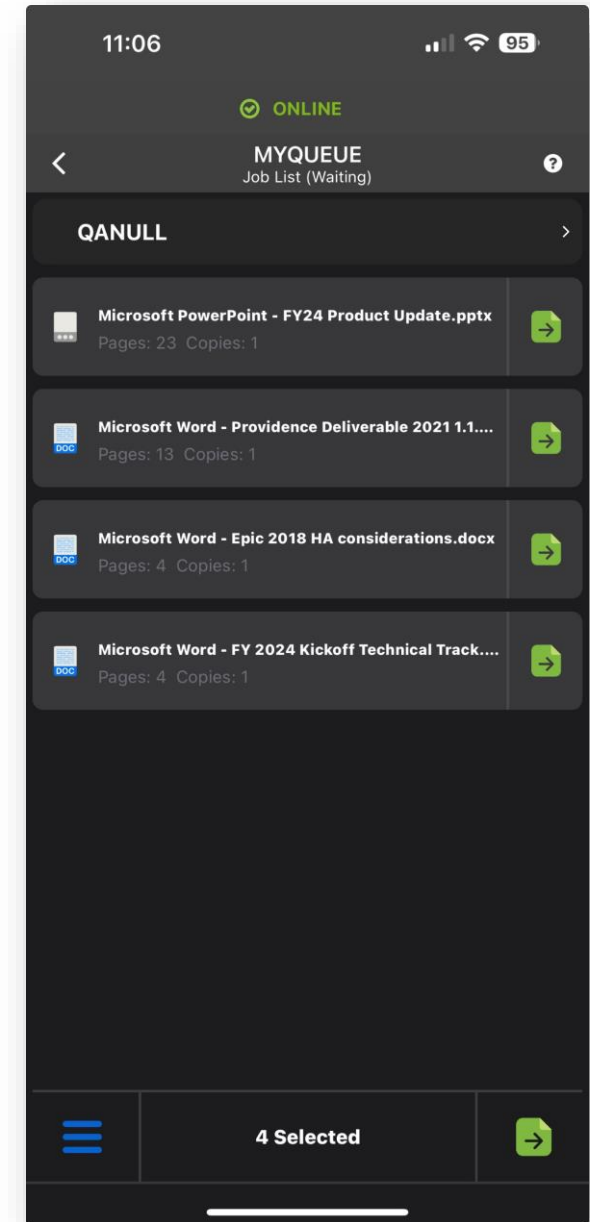

Assured Delivery LRS PjL Delivery

- Advantage of PjL for page level delivery
- Long standing proven method that LRS products have used
- Now extended to Zebra and SATO label printing

VPSX Print APP

- Active-Active NLB is getting more common.
- Before, however, the print release app would list only one server's worth of jobs.
- This has been enhanced to show jobs in multiple VPSX instances of the PPQ

Controlling print behavior from the fleet

The screenshot displays the LRS UK user interface. On the left, a navigation menu is visible with the following items: Machine Administrator, Secure Print (with a key icon), Machine Administrator, Secure Print (with a key icon and 'Advanced' label), Black and white, Two-sided (Pri), Mobile Connector, Innovate/Audit, Print Server, Gateway, and Security. The 'Secure Print' menu item is highlighted, and a sub-menu is open showing: Printers, PersonalQs, MFPsecure, HW08284.LRSINC.ORG, Dashboard, Users, Agents, Configure (highlighted in blue), and Logs. The main content area shows the configuration page for 'HW08284.LRSINC.ORG'. At the top of this page is an 'Update' button. Below it are 'Modify' and 'Reset' buttons. The configuration options include:

- Automatically close Secure Print application after a successful print or delete. Timeout value: 60 (0-60 seconds)
- Enable Print & Keep
- Enable no-touch release
- Print all queues
- Enable one-touch release
- Override Printer List URL
- Enable advanced print options (highlighted with a green circle)

Below these are several settings with input fields and 'Disable' checkboxes:

- Cache the printer capabilities from the print server: 168 (0-168 hours) Disable
- Job name format: %JOBNAME% - %DATE% %TIME%
- Sort jobs by: Date ascending
- Cache the user alias: 24 (0-168 hours) Disable
- Cache the user preferences from PPM: 24 (0-168 hours) Disable

Demo System & LRS Mission Control

Futures – Innovate/Audit

Futures – Direct Print

MFPsecure/Scan UI

The screenshot displays the 'Secure Scan Admin' web interface. On the left is a sidebar menu with the following items: Printers, PersonalQs, MFPsecure (highlighted in blue), EOMSSWDEMO.LRSINC.O..., Dashboard, Users, Agents, Configure, Secure Scan (highlighted in blue), Logs, Mobile Connector, and Innovate/Audit. The main content area features a top navigation bar with the LRS logo, 'R4', 'Secure Scan Admin', a user profile 'VSV1 admin', and a 'Logoff' button. Below this is a 'Profiles' section with tabs for 'Profiles', 'Data Sources', 'User Manager', and 'Advanced'. The 'Profiles' tab is active, showing a list of profiles with columns for 'Active', 'Not deployed', and 'Disabled'. The profiles listed are: 'Test by SL' (Active), 'To My Folder' (Not deployed), and 'To My Folder 2' (Disabled). Each profile entry includes an LRS icon, the profile name, and action icons for edit and delete.

VPSX and MFPsecure in Traffic Managed/Load Balanced environments

6d ago • 7 Views

Introduction

Introducing load-balancing and/or traffic management network agents, such as BigIP/F5 and NetScaler, between LRS components such as VPSX, MFPsecure and MFPsecure Agents will cause fatal operational issues if the network agents are not configured appropriately.

Since the network agents are not "just routing", they may not pass the communication packets though untouched - packets may be opened, inspected and re-written and this will lead to issues in the areas of IP source information and HTTPS certification.

LRS are not responsible for the configuration of these network agents, but this document aims to describe the issues that arise and the configuration requirements that may need to be implemented. Example configuration detail of certain network management tools may be available - please contact your LRS Software Consultant or LRS Support.

Scope

The intended readers of this document are:

- technical network engineers
- technical project managers
- print solution administrators

Release Notes: Open Systems

A person in a light blue shirt is using a tablet to interact with a modern office scanner. The scanner is white and grey, with a large flatbed and a control panel on the right side. The person is holding the tablet with both hands, and their right hand is touching the screen. The scanner's lid is open, and a sheet of paper is visible on the flatbed. The background shows an office environment with a red wall and a black office chair.

State of the art Scan

Guy Tucker

MFPsecure/Scan

- MFPsecure/Scan streamlines digitization and document routing processes
- With advanced, user-friendly, customizable tools for automated document capture, processing, and secure distribution. With MFPsecure/Scan, your scan device becomes a full workflow engine that saves time, eliminates errors, and improves business processes.

The way forward

We need to change how we think about scan

It is not about destinations

It is about process improvement

A word on authority

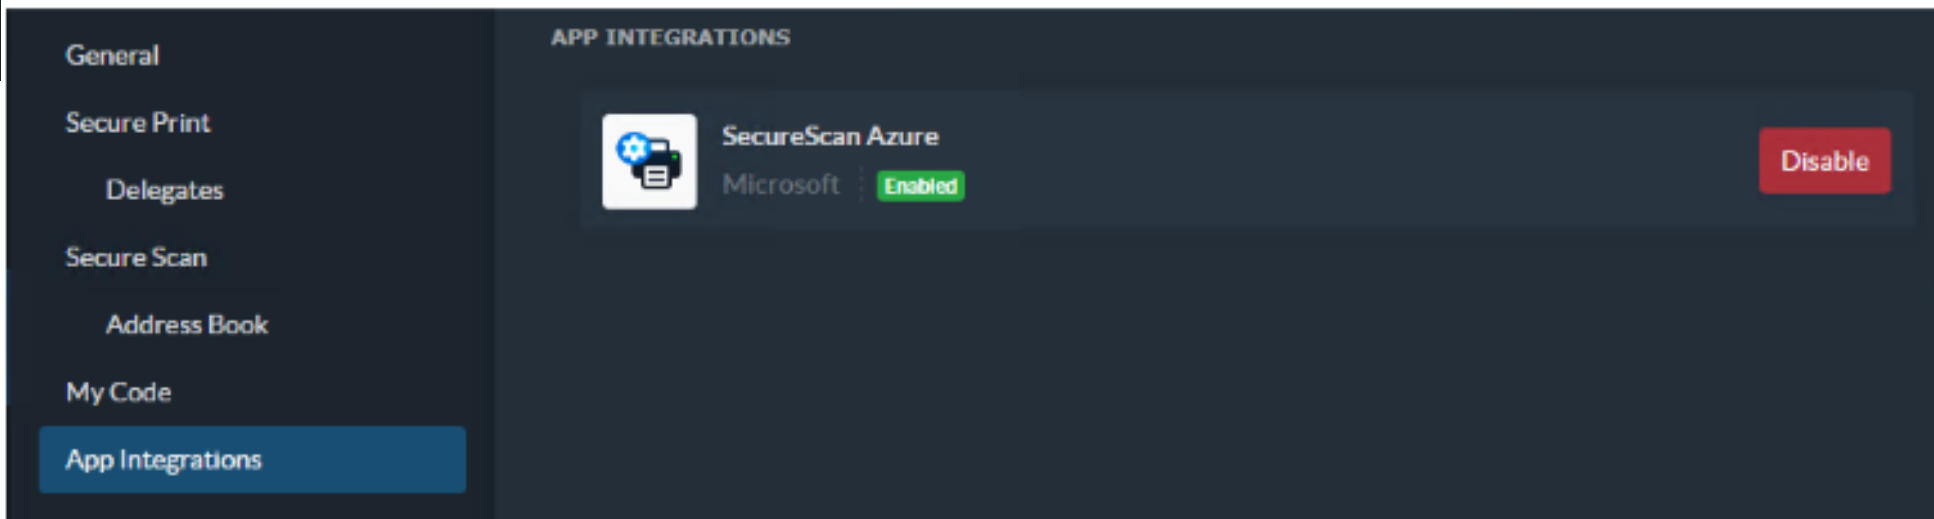

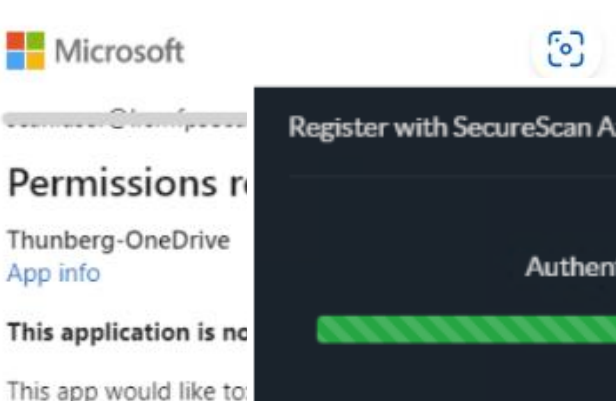

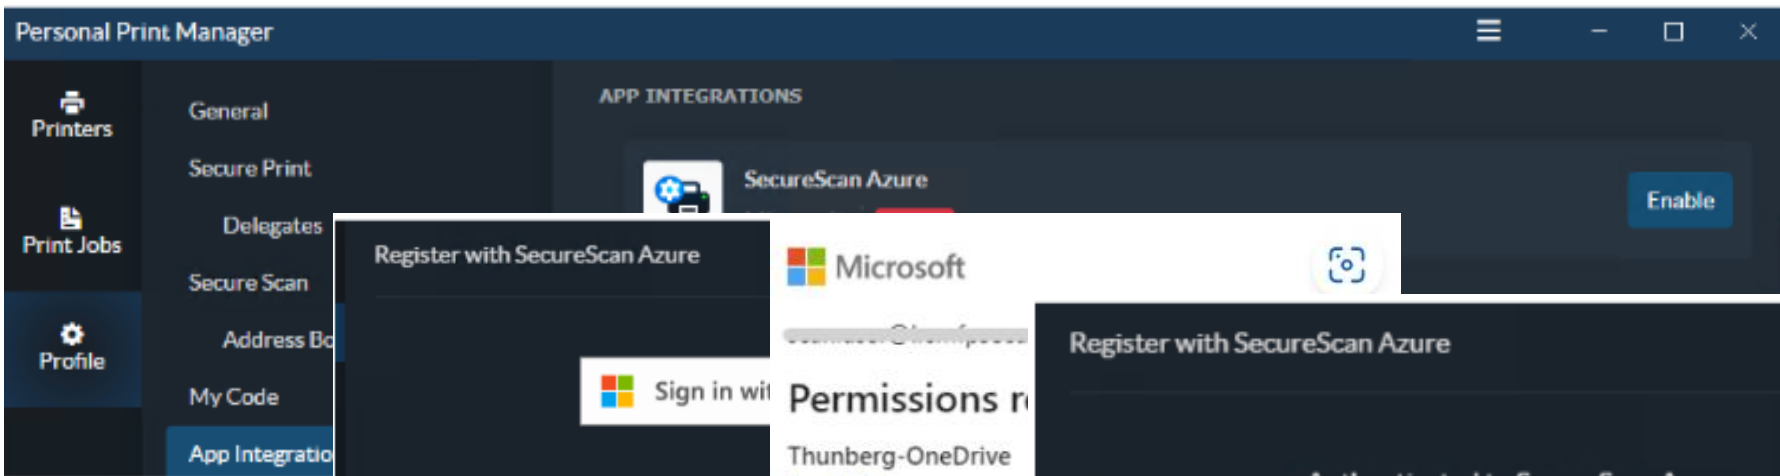

- MFPsecure requires user authentication
- Once the user is known, this is used for later processes
 - Folder access
 - Database updates
 - API user authentication

More on Authentication

- Security vs. Usability
- Badge taps
- MyCode
- User and Password
- Futures?

Scan to OneDrive – user access token

A note on Usability

- Card enrollment
- Set up in advance
- Token creation (Azure)
- Code maintenance

Set and forget

- All administration done centrally
- Authority and permissions from external sources
- Can be customer-configured
- LRS assistance always available

**USE
CASE**

An energy company

- A batch of orders is scanned. The orders are separated by covers sheets.
- The Cover sheet has barcodes and text. The scan process resolves the barcodes and looks for text (OCR) on the cover sheet.
 - The values are evaluated for recognition, and to ensure all values are present
- IF all are available, then the document triggers a later application flow
- If not, then the document triggers a human process or, if the document is bad enough an Error workflow, to sort the problem

Construction company

- Faxing is still a heavily used technology
 - It is secure.
 - It provides a physical proof of delivery to the user
 - It is easy to set up.
 - But it requires another machine.
- Electronic means and orders are nice but
 - They require a network-based computer
 - And knowledge of how an application works
 - And a user that is logged onto the machine.
- These concepts can be difficult to cover in a construction scenario

Construction company

Using LRS Scan technology

- The construction site scans the document providing a fax number in the UI
- The backend scan technology notes the printer's name. The document and number are sent to a web-based fax service.
- Success or failure is returned by the web-based service
- This status is emailed back to the LRS server with the printer name noted
- As such, the success or failure is printed on the device.

Construction company

- NO user had to be logged in.
- The sender got their confirmation
- The MFP needed no fax card or phone line, just connection to the network.

LRS and SAP in the New World

Chris Taylor

Session Topics

- LRS Old World
- LRS Mid World
- LRS New & Legacy World

What LRS Provides

- Previous Capabilities
- What LRS added
- What's New

SAP Printing is CHANGING

In the past SAP output was not fully composed, so LRS enabled:

- ✓ Device Independence of the print data-stream
- ✓ No requirement for SIMMS and DIMMS
- ✓ Generic device definitions not specific ones (SAPGOF)
- ✓ Generate Unicode Output on any laser device
- ✓ Generate Barcodes easily on any laser device
- ✓ Fonts to include selectively in the print data because SAP didn't do that and Unix systems are NOT LICENSED for windows fonts.

Assured Print Delivery
Printer Device Independence
Generation of Bar Codes & Fonts

SAP Evolution To Date

- ✓ SAP customers had to use Adobe Document Server (ADS)
 - ✓ Provided fully composed, ready to print documents – so no Unicode or barcode font can
 - ✓ But many customers were still using SAPScript and SmartForms, so documents print ready were
- ✓ Features were added to make it easier for SAP admins (SAP admin) to more easily create printer definitions
- ✓ Easier for admins to synchronise printers across many SAP systems
- ✓ Worked with LRS to create an API to manage printers - The EOS Replicate script was created - SAP printers can be managed directly from VPSX with no manual SAP interaction

Acronym / Terminology

ADS = Adobe Document Server

Document Composition Solution for SAP

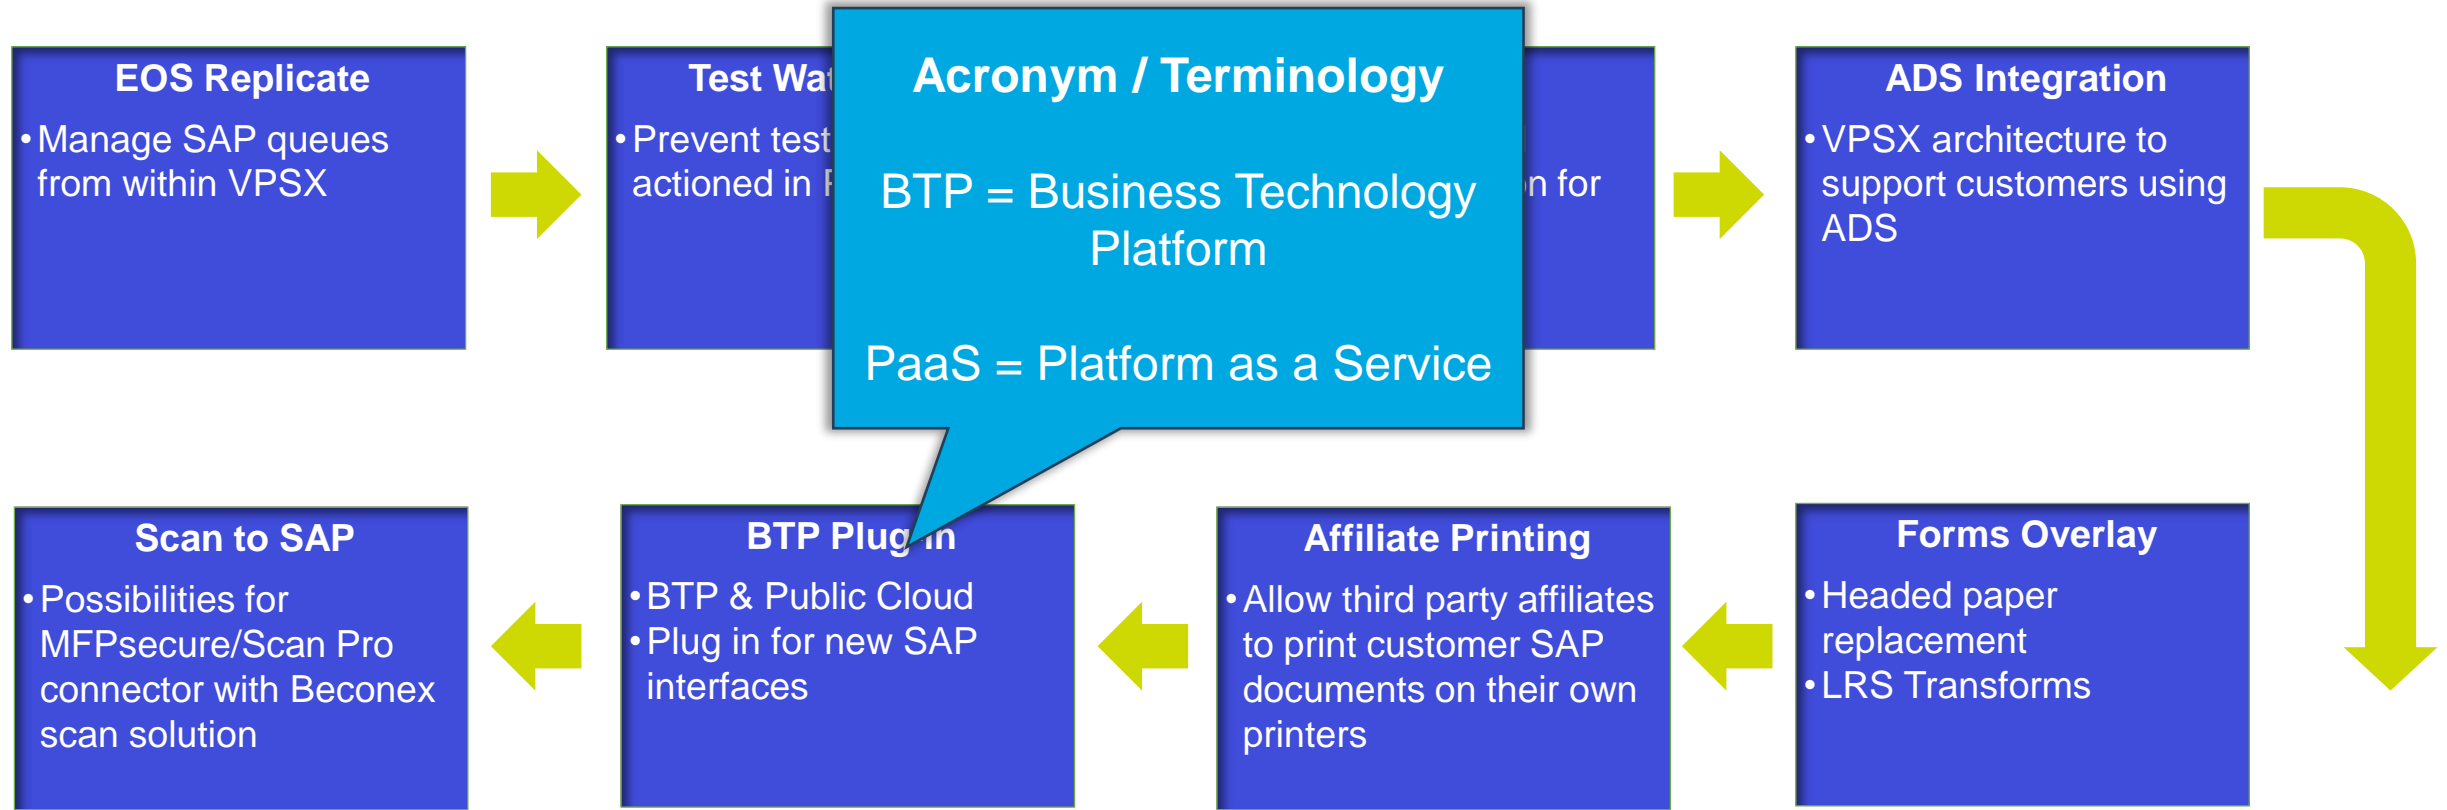

SAP Standardised on ADS
SAP Creates Fully Composed Documents
LRS / SAP Created a Printer Synchronisation Function

社外品名 : NALC02350 S11100

LRS Continually Added Value and Functionality

EOS Replicate

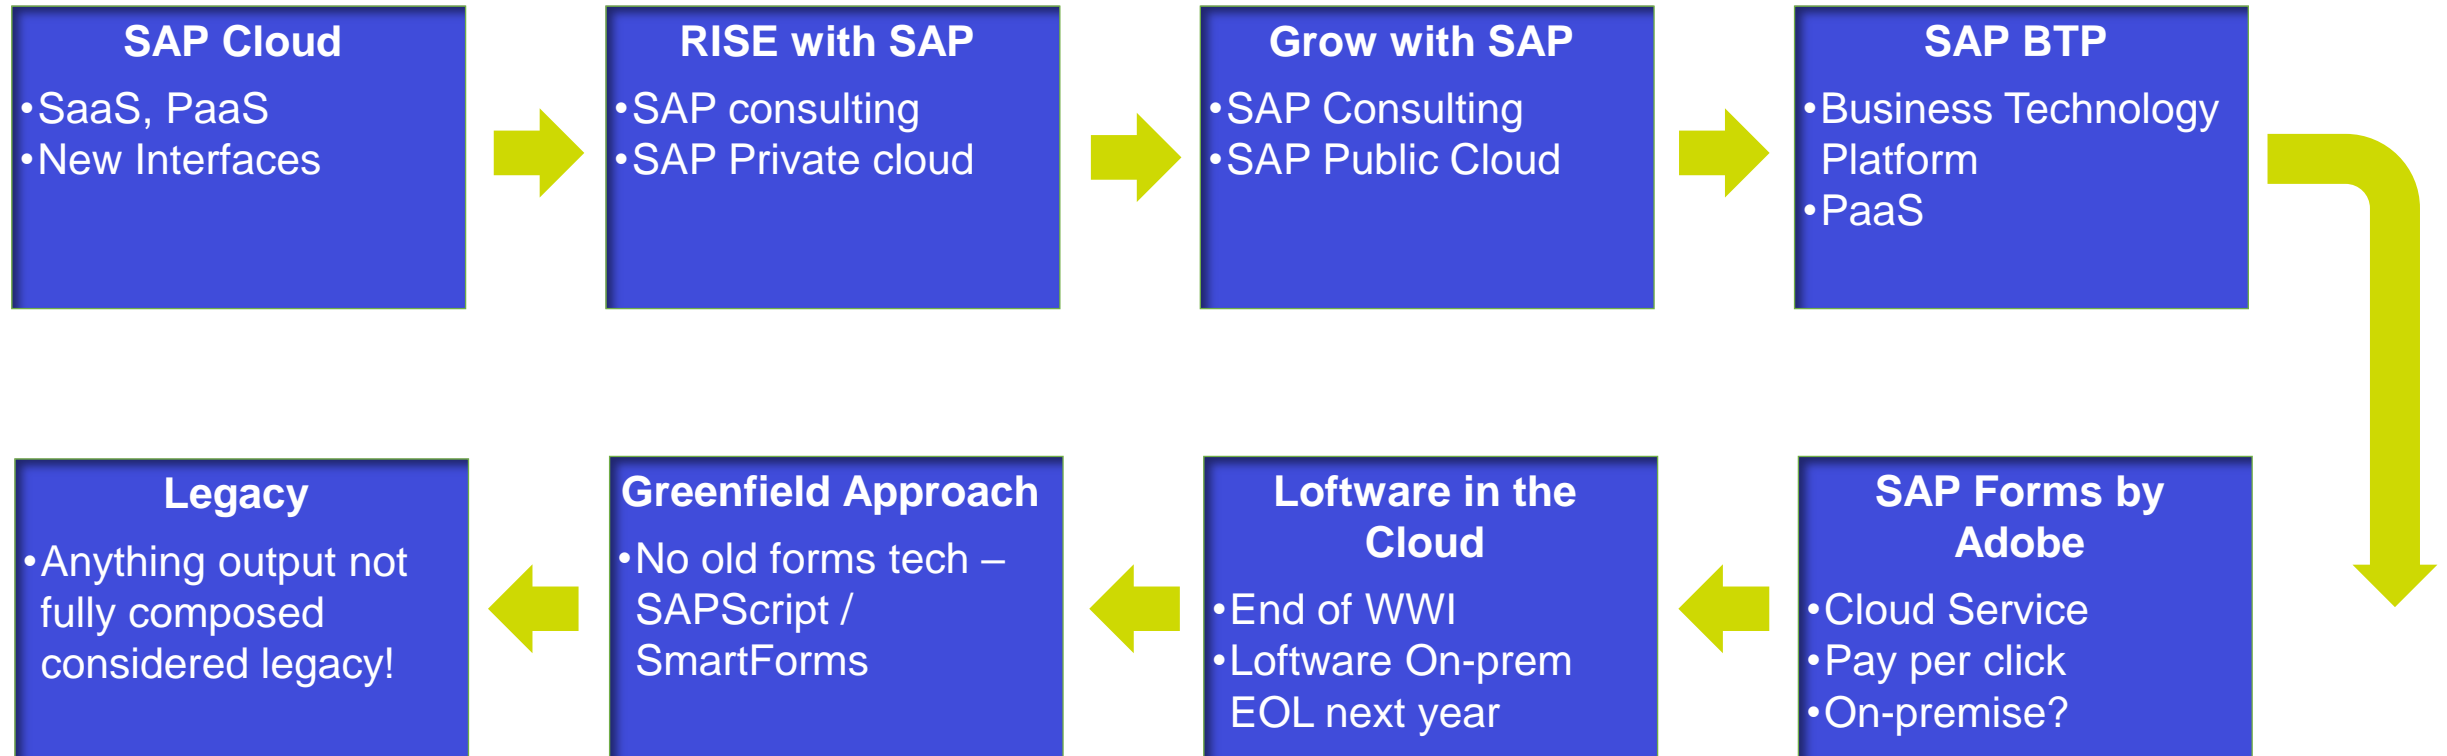

- Automatic SAP printer definitions in all systems
 - No time required from SAP Basis for printer definitions
 - New Printers or changes are available within minutes
 - Can be bound into your internal IMAC/D processes
- Reduction of time of SAP Basis and programming to zero for output issues
 - Projects no longer disrupted by daily troubleshooting of output issues
 - Its like getting 25% more staff.
- Assured Delivery
 - SAP Output no longer goes missing or is duplicated

Affiliate Printing

- Support for Third Party SAP Printers
 - Business partners access the customer SAP systems
 - Business partners have their own IT print infrastructure
 - Internet only access is available for the partners printers
- SAP Infrastructure Simplification
 - Business partner VPN's are no longer required for every location that requires the function of SAP print
 - No specialist port openings are required
- SAP Delivery Enablement
 - Business partners can print critical SAP customer labels and documents to their own printers (third-party printing)

But NOW its all about S/4HANA and the Cloud

ADS and Business Suite 7 Changes

Adobe Document Services out of support in 2027 - extended maintenance available until 2030

- It is pay per use (also preview) click charge
- Customers will have to change to “SAP Forms by Adobe” which is a BTP service
- Will there be an OnPremise possibility?

SAP standard documents for both Adobe Document Services AND SmartForms/SAPScript will also be out of support.

- Business documents will ONLY be supported and maintained in the new Business Technology Platform (BTP) based service.

And what is with Labels

- SAP are working with Loftware to create a new Cloud based Global Label Management solution (GLM), which may, or may not have a document delivery component.
- The GLM target release date is December, 2024
- This will replace the current SAP Windows Word Integration GLM solution

SAP S/4HANA Migration Strategy

Print and Output**

SAP S/4HANA Implementation

Where?

**Infrastructure
running SAP**

- On Premise
- S4/HANA Cloud,
Private (was HEC)

Who?

**Infrastructure &
Transition
managed by**

- Company
- Hosting Partner (IaaS)
- Outsourcer (SaaS)
- SAP (SaaS)

What?

**Print
Infrastructure
Running SAP**

- On Premise
- S4/HANA Cloud,
Private (was HEC)
- EMS

Typical SAP Output Environment

BEFORE

Typical SAP S/4HANA Cloud for Any-Premise Deployments

- ! Hundreds of firewall port openings
- ! 50+ distributed Windows Print Servers (WPS)
- ! Complex change control (printer add/change/delete)
- ! IT infrastructure / operational complexity
- ! SAP print outages
- ! Increased TCO

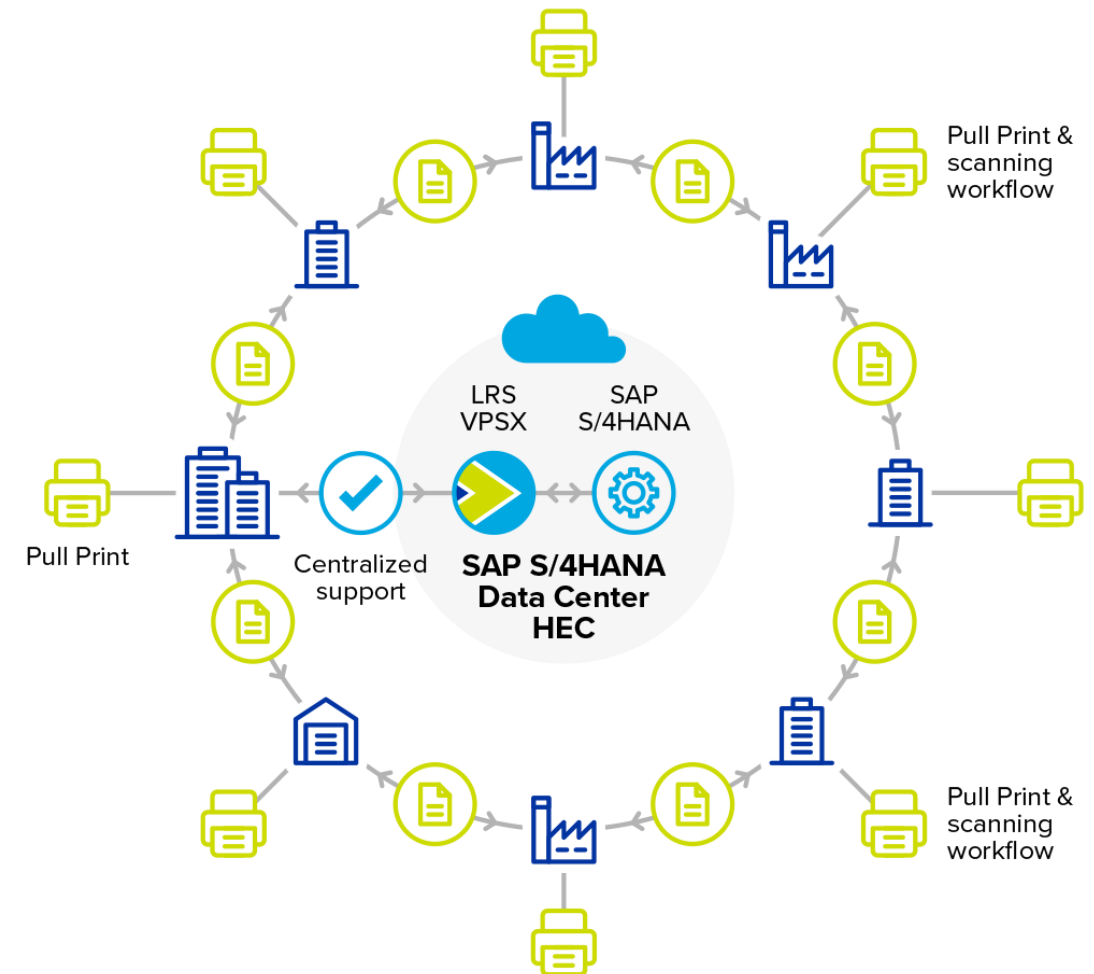

LRS Output Management for SAP

AFTER

LRS Output Management SAP S/4HANA Cloud for On - Premise Deployments

- ✓ Limited firewall port openings
- ✓ Simplified IT infrastructure (no WPS, SAPSprint or CUPS required)
- ✓ 100% SAP print availability
- ✓ Simplified migration
- ✓ SAP print feedback
- ✓ SAP approved
- ✓ Reduced TCO

What LRS Supports

- ❖ LRS Offers one solution for all locations and SAP offerings (OnPremise, Public Cloud, Private Cloud, and BTP)
- ❖ LRS solutions runs On Premise, in the Cloud or Hybrid and can be run by LRS, the IaaS provider, or the customer

| | LRS |
|--------|----------|
| | |
| SAP | |
| SAP | |
| SAP | |
| SAP Di | |
| SAP | ing with |

The key takeaway here is that no matter what path you wish take with SAP, LRS has a solution for it and an SAP certified integration!

Key Elements for SAP Greenfield Environments

Barcode & Label Printing (Automation)

- Requires support for devices beyond regular laser printers
- Special barcode formats for Zebra, SATO, Printronix, Toshiba, & others

Data Transforms

- Offers flexibility in output formats and devices over time
- Enables new document usage without changing base SAP application

Forms

- Special formatting to help stakeholders
- Security features (watermarks, etc.)
- New SAP versions will force changes

Digital Transformation

- Scanning / imaging functions close loop on critical document workflows
- Cloud-ready solution is a key strategic capability

So what technical features are related to SAP Legacy Printing - Brownfield?

- ✓ Critical Production Printing
- ✓ Device Independence of print data
- ✓ Generate Unicode Output on any laser printer
- ✓ Generate Barcodes easily on any laser printer
- ✓ Transform Prescribe (Kyocera Printer Language)
- ✓ Generic device SAPGOFU
- ✓ Replace SIMMS and DIMMS
- ✓ LRS Licensed Fonts because Unix systems are NOT LICENSED for windows fonts

All Core Capabilities
Assured Print Delivery
Device Independence
LRS Data Transformations

Customer Business Values

- ✓ Reduce the Total Cost of Ownership (TCO)
- ✓ Improve the service
- ✓ Prevent document delivery failures impacting business operations
- ✓ Eliminate reliance on costly and virus prone Windows print servers
- ✓ Reduce SAP Basis involvement for Printing

Reducing the Cost, Improving the Service

One Solution for all SAP editions, offerings and locations

- ✓ BTP Plug in
 - ✓ Internal Development
 - ✓ SAP Offerings like DMC (Digital Manufacturing Cloud)
- ✓ BC-XOM Certification
 - ✓ On Premise
 - ✓ Private Cloud - Works with RISE with SAP
- ✓ Public Cloud plug in
 - ✓ Grow with SAP
- ✓ SAP SuccessFactors ECP (Employee Central Payroll)

*Key Take-away:
No matter what flavour of SAP,
LRS has a solution*

Reducing the Cost, Improving the Service

Eliminate reliance on costly and virus prone Windows / CUPS print servers

- ✓ Vertical Scalability, reducing the number of servers required
- ✓ No targeted viruses

LRS Continues to have No requirement for Windows Print Servers or Common Unix Print Systems (CUPS)

Reducing the Cost, Improving the Service

Zero involvement of SAP Basis in daily printing issues and printer definition maintenance

- ✓ Automated management of printer definitions in multiple SAP instances
- ✓ Empowerment of the Help Desk
- ✓ Streamline Forms design (Tray mapping and Finishing Options)
- ✓ According to LRS studies, this will result in a 25% reduction in SAP Basis resources

Off-load SAP Basis team activities relating to Print

Reducing the Cost, Improving the Service

Prevent document collection and delivery failures impacting business operations

- ✓ Assured delivery of critical SAP documents
- ✓ Provide On Demand Collection of Print Jobs
- ✓ Provide Integration in Warehouse and Production Line systems

And Finally,
**ENSURING PRINT PROBLEMS DO
NOT BECOME BUSINESS
PROBLEMS**
