

Secure Printing

Release print jobs after authentication at the printer, minimize waste for uncollected print jobs and limit helpdesk calls for unavailable devices.

Cirrato One with Secure pull print is an application that allows users to release print jobs on any printer on the network. If a device is unavailable, the user can choose to release the documents at another printer. And with the Time-To-Live feature, uncollected print jobs will be erased from the queue to avoid waste for uncollected print jobs.

Description

Cirrato One pull print is a secure printing feature that allows user to choose when and where they collect their print jobs. It gives users the flexibility to print at their convenience.

A Secure pull print queue is a print queue without a printer connected to it. Jobs submitted to the Secure pull print queue wait there until the owner authenticates at a print device and releases them. Then Cirrato One™ moves the job from the Secure pull print queue to the device's own queue. Authentication can be done via pin, swipe card or network password and their jobs will be released.

If people do not collect their print jobs, these jobs will be deleted from the print queue after a set time to prevent waste.

How it works

If the device is a single-function printer with a network card reader, all of the print jobs will be released ("simple Secure pull print"). If an Embedded Secure pull print app is used on a printer, the owner can choose from all of his submitted print jobs and can select to delete after printing or retain them for future reprint.

How does the Embedded app know which jobs to display? They are the jobs submitted by the authenticated user to the Secure pull print queues.

The new mobile release app (available for iPhone and Android) will allow users to release jobs using their smart phone or tablet.

Qualifying questions

- Do you want to protect sensitive data in your organization?
- Do you want multiple departments to share printers?
- Do you want people to have a choice in when or where they collect their print jobs?
- Do you want to prevent waste for uncollected print jobs?

If you have answered yes to any of these questions, Cirrato can help you save costs and improve printing.
